My first 30 days at IDC

The same pattern as **RegRadar**, pointed at IDC's partners: always-on Claude workflows, with a person approving every step that matters.

THE PATTERN

New signal arrives → AI extracts key facts, with citations → Checks against partner profile → Flags what changed & why → A person approves

THREE USE CASES FROM THE ROLE

1

Partner signal monitoring

News, competitive moves and market data on P1 partners, summarized with sources.

2

Inbound partner triage

Rules-based scoring against IDC's qualification criteria, with reasons. A person approves or overrides.

3

Follow-ups & status reporting

CRM hygiene, overdue deliverables, drafted follow-ups, a weekly leadership brief. Nothing goes out unapproved.

THE 30-DAY PLAN

WEEKS 1–2

Learn & scope

- Meet the Directors of Strategic Partner Development and Partner GTM / Activation
- Pick 3–5 P1 partners
- Write one-page profiles; choose sources

WEEKS 2–3

Build

- Claude workflow that flags what changed and why it matters
- Citations on every item
- Test on real items

WEEKS 3–4

Ship & hand off

- Weekly brief to team Slack / email: approve, dismiss, follow up
- Log decisions to tune the rules
- Runbook: logic, data sources, handoff

DAY 30 — Working weekly P1 Partner Signal Brief — Runbook for the team — Shortlist of next tasks to automate

HOW SUCCESS IS MEASURED

Hours saved

Manual tracking time saved per week, measured against a baseline taken in week 1.

Useful flags

% of flagged items the team marks as useful, from the approve / dismiss log.

Zero

Sends without human approval.

GUARDRAILS

- ✓ Citations on every item
- ✓ A person approves
- ✓ No sensitive data to start

WHAT I BRING

Retell AI
First product intern: product UX & ops

Hatch
Project engineer: iron, steel & aluminum

Zebra
PM intern

Duracell
Product strategy consultant

t7-x
Co-founder: AI for automotive supply chain

RegRadar
Built it. Live demo ↗

RegRadar already does this for regulations. **The 30-day goal: the same pattern working for IDC's P1 partners**, plus a runbook so the team can keep running it.
